

The First Nature for Skin

MUKKUNG

about MUKKUNG

MUKKUNG

Daily life in which clothes, food to eat, and cosmetics to use vary depending on gender, age, and generation.

MUKKUNG didn't want to distinguish it.

It's one and only cosmetics that you can use with your children, family, and friends.

MUKKUNG, which means "bundle" in Jeju dialect, was created for this purpose.

It is a natural mineral cosmetic made of acer mono sap that can be used by the whole family regardless of age and skin type.

It's a skincare product that can be used by the whole family regardless of age or skin type.

The acer mono sap, a core ingredient, contains natural minerals, amino acids, and vitamins

MUKKUNG

The entire ingredients and eco-friendly production methods that are as strict and safe as food.

The rapid absorption, natural nutrition, and moisturizing effects of ionized minerals smaller than molecules.

A mono maple full of nutrients from Baegunsan National Park, an uncontaminated natural forest.

The acer mono sap, a gift from nature extracted once a year by non-destructive methods.

Non-heat sterilization treatment to preserve natural minerals.

Process of maximizing the raw material so that the stability of the formula can be secured.(99.2%)

Since it is a natural raw material, strict safety inspections are conducted for all processes.

MUKKUNG skincare product with natural minerals suitable for your skin.

Natural sap that originated from nature 365 days a year.

Baegun Mountain's Acer mono sap in Gwangyang, Korea

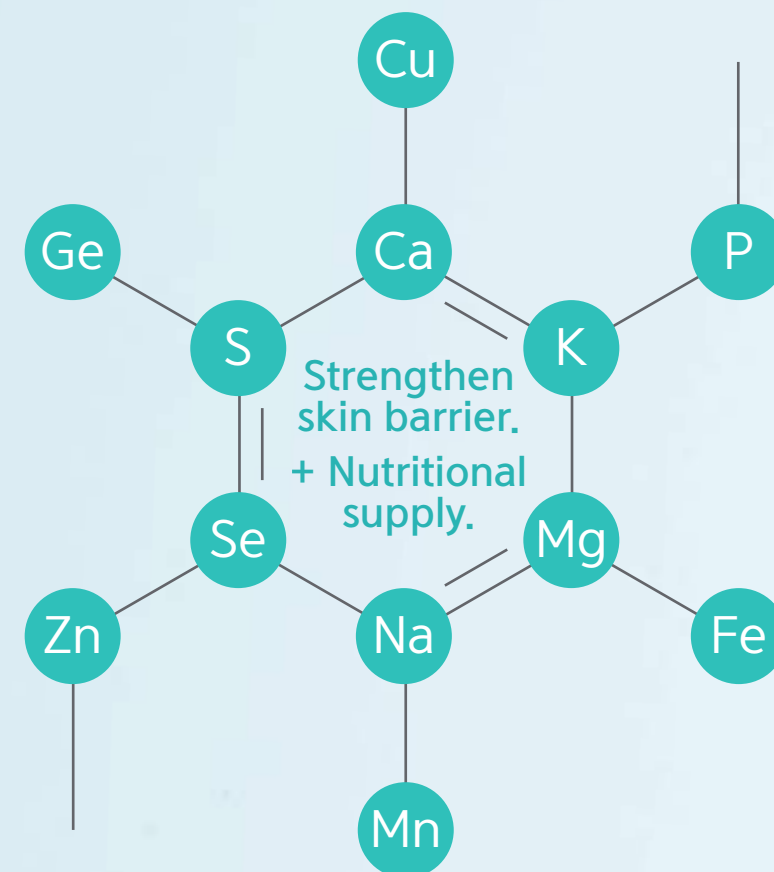

The Baegunsan Forest in Gwangyang, where people cannot reach, and the mono maple tree, a native plant of Korea full of natural nutrients.

POINT01

- Collected from Baegun Mountain, Gwangyang-si, Jeollanam-do, located at 1,222m in height, 1,080m in elevation, 35.1 in latitude, and 127.6 in longitude.
- Baegun Mountain in Gwangyang, a monumental space belonging to the Korea Forest Service's Geographic Labeling Registration No. 16 and the Korean Intellectual Property Office's Geographic Labeling Group Mark Registration No. 132.
- Koo Yong-ju and Jang Hyung-soon, government-approved professional collection producers, live in Seodong Village, Gwangyang, Jeollanam-do, and collect and manage sap professionally.
- It's collected only once a year in a non-destructive method.
- Choose a tree with a diameter of 40cm or more that has grown over 10 years.
- Install up to 3 to 5 collection tubes of less than 8mm per tree.
- Use of a natural coating agent that promotes agglutination after collection (treatment)

POINT02

Natural mineral ingredients

- Contains natural mineral ingredients with various effects, including antioxidant, detoxification, absorption and transport of nutrients, collagen production, and skin immunity enhancement. The molecular structure is formed into a small ion form and is quickly absorbed into the skin.

Natural moisturizing factor

- Natural moisturizing factors that have secured the effect of supplying nutrients to the skin such as fatigue recovery, collagen formation, moisture supplementation and moisturization, and moisture retention.

Additional vitamin ingredients

- Contains ingredients that have antioxidant, oxygen removal, moisture film formation, moisturizing and maintaining moisture, and blocking moisture evaporation.

POINT03

COSMOS raw material certification

Acer mono sap, the main raw material of MUKKUNG products, has obtained European natural organic COSMOS certification. COSMOS APPROVED Raw Material Certification (Certification Number – 1138005, Certification Authority – ECOCERT)

What is COSMOS–standard?

It is an international certification standard for organic and natural cosmetics developed by AISBL co-founded by BDIH (Germany), BIOFORUM (Belgium), COSMEBIO&ECOCERT (France), ICEA (Italy), and SOIL ASSOCIATION (UK). It integrated the certification standards of various certification agencies in Europe, which had been previously operated, into one, and was officially implemented from January 1, 2017. Currently, it is recognized as the most trusted certification in the international organic and natural cosmetics fields.

POINT04

The annual ingredient test

To prevent risks from soil and water pollution in advance, natural minerals, amino acids, vitamins, and pesticide residues tests (320 types) are conducted every year. In addition, it is manufactured more safely and reliably by disclosing the contents of the ingredient test.

Reliable authentication system

MUKKUNG uses only acer mono sap certified as drinking water (above 1.6 Brix, pH 4.5 to 6) as a raw material. MUKKUNG's acer mono sap is certified as a natural organic COSMOS ECOCERT Approved raw material in Europe and has completed safety inspections after being manufactured by Radiant Co., Ltd., an ISO 22716 certified facility.

POINT05

Introducing raw material vintage for the 1st in the industry

For wines where the harvest time of raw materials is important, indicate the year (vintage) when grapes were collected every year. Other natural fuels also vary from year to year, so you need to check when, where, and how they are made. MUKKUNG confidently marks the vintage of acer mono sap used for the first time in the industry because it directly manages from raw material collection to manufacturing.

MUKKUNG's Acer mono sap

Coverage of MUKKUNG's Acer mono sap

- Cosmetic ingredients
- MUKKUNG's acer mono sap is a natural ingredient in which green tea extracts are added to the sap collected from Baegunsan in Korea.
